## NEW Centurion Brick

Centurion is a new brick size which captures the beauty of historic Italian design. These long, slim bricks are available as both full-bed brick (3 5/8" thick), and as thin brick (3/4" thick). Most of our most popular colors and finishes will be available in Centurion shapes, including our Sandmolds.

See page 32

## Large Format Sandmolds

We now offer the beautiful, soft textures of our Sandmold Series in larger sizes for both full-depth brick and Thin Brick. The 12-inch lengths of the Utility and Norman sizes extend the design possibilities, and may be better suited for larger buildings.

Norman Sandmolds are similar in appearance to ancient brick found across Europe.

Both Norman and Utility Sandmolds benefit from faster, more efficient installation derived from their larger sizes.

See page 34

## BrickFast™ Type McN

The BrickFast™ Type McN panel system is an innovative way to quickly, accurately, and securely install Thin Brick veneers. The system incorporates a true mechanical attachment between each field brick and the galvanized metal panel, and does not rely on adhesives for its long-term strength and durability.

See pages 30-31

# Clay Brick

## Thin Brick, Face Brick

McNear Brick & Block's roots go back to 1868, making us one of the country's oldest brick manufacturers. We produce a broad selection of Face Brick, Thin Brick, and Brick Pavers in colors and textures ranging from the soft, handmade look of our Sandmold Series, to the "reclaimed" aesthetic of our Old California Series, to the vibrant, sharp colors and edges of our Commercial Series. In addition to the products shown within these pages, we have the capability of manufacturing custom blends, shapes, and colors. All the colors depicted herein are available as Face Brick, Thin Brick, and as Brick Pavers. McNear brick products meet the standards of ASTM C216 Grade SW and ASTM C1088 Grade Exterior, and are suitable for use in freeze/thaw environments.

## Thin Brick

McNear Brick & Block recognizes that Thin Brick is an important and growing sector of brick construction, and we offer many shapes and sizes of Thin Brick to be used either independently, or in conjunction with matching full-depth brickwork.

This newest generation of brick products has much to offer:

- No expensive footings or supports required
- Do-it-yourselfer friendly
- Faster construction times
- Great for remodels
- Easier to insulate
- Applicable to any surface, interior or exterior
- Thinner walls, creating more usable space
- Easier and cheaper shipping and handling
- New avenues for brick use (ie: ceilings)
- Much lower embodied environmental costs
- No seismic concerns
- Works with Panelization and Precast construction.

Thin Brick gives these benefits without sacrificing any of the durability, low maintenance, beauty, and value of traditional brick construction.

## BrickFast™ Type McN Panel System

BrickFast™ Type McN panels stand out from other thin brick attachment methods, as an extremely fast, simple, and secure system. The 4' by 4' BrickFast Type McN galvanized steel panels have tabs that engage matching slots cut into the backs of the bricks, creating a strong mechanical bond. While adhesive is used during installation, the long-term strength of this system comes from the mechanical attachment of the bricks to the panels.

BrickFast Type McN is used in the same way as other cladding systems, with similar methods of moisture control and insulation. It can be installed directly over weather resistive barriers, drainage planes, rigid foam insulation, structural insulated panels, or a combination of these substrates.

- BrickFast Type McN is suitable for both new construction and remodels. It can be used on both interiors and exteriors.
- BrickFast Type McN can incorporate special shapes, such as Sills and thicker bricks for Quoins, etc.
- BrickFast Type McN panels are available for a variety of brick sizes, including: Modular (2-1/4 x 7-5/8 x 5/8), Norman (2-1/4 x 11-5/8 x 5/8), Utility (3-5/8 x 11-5/8 x 5/8), King (2-5/8 x 9-5/8 x 5/8), and Standard (2-7/16 x 8-1/8 x 5/8).
- Special BrickFast Corner panels are used, which wrap around the corners.
- BrickFast Type McN panels are made from 28-gauge, galvanized (G60) steel. Other materials (ie: 26-gauge G90) are available as special order.
- BrickFast Panels meet or exceed the standards of ASTM A653 and E330.

## 4 Simple Steps

## Introducing CENTURION – Thin Brick & Full Brick

Tivoli

Norfolk

Holbourn

Random

Running Bond

### Centurion

The new Centurion long-format brick captures the elegance and beauty of historic Terra Cotta, and gives the modern designer the means to create striking linear textures.

We manufacture Centurions in both full brick and thin brick shapes, and most of our Sandmold, Town, and Commercial colors can be made in a Centurion size. Contact us to learn the availability of specific colors.

## The Textures of Brick with the Colors of Paint

Painted brick walls combine the nearly unlimited color choices of paint with the rich textures of brick. Bricks create a regular, but individualized pattern. To varying degrees depending on the brick type, each individual brick bears the unique marks and deformations produced during its creation.

The photos below show the range of textures possible from painting different McNear brick types.

## Large Format Sandmolds

McNear Sandmolds are now available in Utility (11-5/8" x 3-5/8") and Norman (11-5/8" x 2-1/4") sizes, both in Full-Depth brick and in Thin Brick.

Bringing the historic, hand-made texture to larger bricks can be particularly useful for projects where the scale would benefit from larger bricks, but where a traditional character is still desired.

Norman Sandmolds are similar in appearance to ancient brick found across Europe.

Both Norman and Utility Sandmolds benefit from faster, more efficient installation derived from their larger sizes.
